ABSTRACT OF THE DISCLOSURE

     The invention enables approval decision
without a long waiting time of the approval
requester even when the approval decider is absent
5   or busy. A client terminal prepares an approval
request, and the prepared approval request is
stored in an approval request storage portion of a
request server. Also an approval service set by
the approval decider is stored in a service server.
10   Then the approval service matching the approval
request stored in the request server is searched
from the approval service server, and the approval
decision for the approval request is executed
utilizing the searched approval service.
